Detailed Review of the 2013 June Life Sciences Exam Questions and Answers

Sample Question 1: Cell Structure and Function

Question:

Describe the structure of the plasma membrane and explain its role in cellular function.

Memorandum Answer:

The plasma membrane is a phospholipid bilayer with embedded proteins, cholesterol, and carbohydrate chains. The bilayer consists of phospholipids with hydrophilic heads facing outward and hydrophobic tails inward. Proteins may be integral or peripheral, serving functions such as transport, communication, and enzymatic activity. Cholesterol molecules maintain membrane fluidity, and carbohydrate chains are involved in cell recognition and signaling.

Key Points for Students:

- Understand the fluid mosaic model.
- Be able to label a diagram of the plasma membrane.
- Explain functions such as selective permeability, cell communication, and protection.

Sample Question 2: Genetics and Inheritance**Question:**

Explain Mendel's law of segregation and its significance in genetics.

Memorandum Answer:

Mendel's law of segregation states that during the formation of gametes, the two alleles for a gene segregate (separate) so that each gamete carries only one allele. This occurs during meiosis when homologous chromosomes separate. The significance is that it explains the inheritance pattern of traits and the formation of genetic variation in offspring.

Tips for Students:

- Use diagrams to illustrate meiosis.
- Connect the law to Punnett squares for predicting offspring genotypes.
- Emphasize the importance of segregation in maintaining genetic diversity.

Sample Question 3: Ecology and Environment**Question:**

Describe the process of nutrient cycling in an ecosystem.

Memorandum Answer:

Nutrient cycling involves the movement and exchange of organic and inorganic matter back into the production of living matter. Key processes include:

- Decomposition: Breakdown of dead organisms by decomposers, releasing nutrients into the soil.
- Absorption: Plants uptake nutrients from the soil or water.
- Consumption: Animals obtain nutrients by eating plants or other animals.
- Return: Decomposition and excretion return nutrients to the environment.

This cycle maintains the balance of nutrients essential for ecosystem stability.

Study Tip:

Create diagrams illustrating the nitrogen, carbon, or phosphorus cycles for better understanding.
