Introduction to Sequence Spaces and Functional Spaces

What Are Sequence Spaces?

Sequence spaces are collections of sequences of numbers (real or complex) that satisfy specific properties, equipped with a norm or metric that turns them into Banach or Hilbert spaces. These spaces serve as discrete analogs to function spaces and are instrumental in understanding convergence, boundedness, and other analytical concepts in an infinite-dimensional setting.

Examples of sequence spaces include:

- ℓ^p spaces: Spaces of sequences whose p -th power summation is finite.
- c_0 : Space of sequences converging to zero.
- ℓ^∞ : Space of bounded sequences.

What Are Functional Spaces?

Functional spaces extend the idea of sequence spaces to functions, often defined on subsets of $\mathbb{R}^n$, $\mathbb{C}$, or more abstract domains. They are equipped with norms or metrics to analyze various properties such as continuity, integrability, differentiability, and smoothness.

Common examples include:

- L^p spaces: Spaces of functions whose p -th power is integrable.
- Sobolev spaces ($W^{k,p}$): Functions with derivatives up to order k in L^p .
- Continuous function spaces (C^k): Functions with continuous derivatives up to order k .

Core Concepts and Definitions

Normed Spaces and Banach Spaces

Both sequence and functional spaces are often structured as normed spaces, where a norm provides a notion of size or length. Completeness with respect to this norm yields Banach spaces, which are pivotal in analysis because they guarantee the convergence of Cauchy sequences.

Inner Product Spaces and Hilbert Spaces

Some spaces, like ℓ^2 and L^2 , are equipped with an inner product that induces a norm, making them Hilbert spaces—complete spaces that support geometric notions such as orthogonality and projections.

with the norm

$$\|x\|_p = \left(\sum_{n=1}^{\infty} |x_n|^p \right)^{1/p}$$

- Special Cases:
- $(p=1)$: Summable sequences, important for absolutely convergent series.
- $(p=2)$: Square-summable sequences, forming a Hilbert space.
- $(p=\infty)$: Bounded sequences, with

$$\ell^{\infty} = \left\{ (x_n) : \sup_{n \in \mathbb{N}} |x_n| < \infty \right\}$$
