The Foundations of Biology

Biology is the scientific study of life and living organisms. It seeks to understand the structure, function, growth, origin, evolution, and distribution of living things. At its core, biology is grounded in several fundamental concepts that serve as the foundation for all biological sciences.

Cell Theory

One of the earliest and most important principles in biology is the cell theory, which states:

- All living organisms are composed of one or more cells.
- The cell is the basic structural and functional unit of life.
- All cells arise from pre-existing cells.

This concept underscores the idea that cells are the building blocks of life, whether in simple bacteria or complex multicellular organisms like humans.

Genetics and Heredity

Genetics deals with the transmission of traits from parents to offspring. The discovery of DNA as the genetic material revolutionized our understanding of heredity, enabling scientists to:
