Command words such as "explain," "describe," "calculate," or "predict" guide the depth of response expected. Markschemes specify what constitutes a complete answer for each command.

2. Recognize Key Points for Full Marks

Often, marks are awarded for specific points. For example, in a question about the trend in atomic radius, mentioning "additional shielding" or "nuclear charge" may be necessary for full marks.

3. Understand Alternative Correct Responses

Markschemes sometimes list acceptable alternative answers or wording, allowing flexibility in student responses.

4. Identify Common Pitfalls

Examiners note common misconceptions or errors that do not earn marks, helping students avoid these mistakes.

Using the June 2013 Markschemes to Improve Your Exam Technique

Here are practical ways to incorporate markschemes into your revision:

- **Practice Past Questions:** Attempt questions from the June 2013 papers under timed conditions, then compare your answers with the markschemes.
- **Mark Your Work:** Use the markschemes to assess the quality of your answers, identifying areas where you can improve clarity or include missing points.
- **Develop Model Answers:** Create structured, comprehensive responses based on the markschemes to serve as revision templates.
- **Focus on Command Words:** Ensure your answers directly address what the question asks, aligning with the marking criteria.

Sample Analysis of a June 2013 OCR A2 Chemistry Question

Let's consider a typical question and how the markscheme guides the answer:

Question:

"Explain why the first ionization energy of magnesium is higher than that of aluminum."

Potential Markscheme Points:

- Magnesium has a filled $3s^2$ subshell, whereas aluminum has a $3p^1$ electron (correct explanation of electron configuration).
- Removing an electron from magnesium involves removing from a more stable, filled subshell, thus requiring more energy.
- Aluminum's outer electron is in a higher energy level and experiences greater shielding, making it easier to remove.
- Therefore, magnesium's first ionization energy is higher than aluminum's.

A full-mark answer would incorporate these points clearly and concisely, demonstrating understanding of electron configurations, subshell stability, and shielding effects.

Accessing the June 2013 OCR Markschemes

To make the most of the markschemes, students should:

- Obtain official OCR past papers and markschemes from the OCR website or authorized revision resources.
- Review the markschemes alongside your answers to understand where points are awarded.
- Use annotated versions to highlight key phrases and concepts that align with marking criteria.
- Practice regularly to develop exam skills aligned with official marking standards.

Conclusion

The June 2013 A2 Chemistry OCR markschemes are invaluable tools for students aiming to excel in their exams. They provide clear insights into how examiners allocate marks, what points are essential in each answer, and how to structure responses for maximum impact. By studying these markschemes, practicing past questions, and aligning your answers with the criteria, you can significantly improve your exam performance.
