- Reveal metabolic abnormalities
- Monitor disease progression or response to therapy

The process of sediment examination combines traditional microscopy with modern laboratory techniques, ensuring a detailed and integrated view of urinary health.

Composition of Urinary Sediment

The urinary sediment consists of several distinct elements, each with diagnostic relevance. Let's explore these components in detail:

- Cells

Cells in urine can originate from the urinary tract lining or blood. Common cell types include:

- Red Blood Cells (RBCs): Presence indicates hemorrhage, trauma, or pathological conditions like glomerulonephritis.
