Post-Installation Testing and Quality Verification

Once the pipes are installed, comprehensive testing ensures system integrity before commissioning.

Pressure Testing

Pressure testing is the cornerstone of verifying a leak-tight system:

- Hydrostatic Testing: Filling the pipeline with water and pressurizing to the specified test pressure (often 1.5 times the operating pressure).
- Pneumatic Testing: Using air or inert gas where hydrostatic testing is impractical, with caution due to higher risk.

Testing procedures include:

- Maintaining the test pressure for a specified duration.
- Monitoring for pressure drops indicating leaks.
- Visual inspection for leaks, deformation, or joint failure.

Leak Detection Methods

Leak detection during testing employs:

- Soap solution application to joints.
