Sample Microbiology Case Studies to Solve

Here, we present several detailed case studies designed to test and improve your microbiological knowledge and clinical reasoning.

Case Study 1: Acute Bacterial Meningitis in an Adult

Patient Presentation:

A 45-year-old man presents with sudden-onset severe headache, neck stiffness, fever, and altered mental status. No recent trauma or immunization history.

Laboratory Findings:

- CSF analysis: Elevated opening pressure, increased white blood cells (predominantly neutrophils), elevated protein, decreased glucose.
- Gram stain of CSF: Gram-positive diplococci.
- Cultures: Growth of *Streptococcus pneumoniae*.

Questions to Consider:

- What is the likely diagnosis?
- How does the laboratory data support this?
- What empiric antimicrobial therapy should be initiated?
- How can this infection be prevented?

Discussion:

This case highlights classic bacterial meningitis caused by *Streptococcus pneumoniae*. The CSF findings?neutrophilic pleocytosis, high protein, low glucose?are typical. Gram-positive diplococci on stain and culture confirm the pathogen. Empiric therapy includes third-generation cephalosporins and vancomycin, with consideration for adjunctive corticosteroids. Vaccination with pneumococcal conjugate vaccines is key in prevention.

Case Study 2: Chronic Diarrhea in a Traveler

Patient Presentation:

A 32-year-old woman returns from a trip to Southeast Asia. She reports persistent diarrhea for two

weeks, with occasional blood in stool.

Laboratory Findings:

- Stool microscopy: Ova and parasite examination reveals *Entamoeba histolytica* trophozoites.
- Antigen detection: Positive for *E. histolytica*.
- Culture: No bacterial growth.

Questions to Consider:

- What is the causative organism?
- How is *E. histolytica* diagnosed?
- What treatment options are appropriate?
- How can such infections be prevented during travel?

Discussion:

This case illustrates amoebic dysentery caused by *E. histolytica*, a protozoan transmitted via contaminated food or water. Diagnosis relies on microscopy, antigen detection, or PCR. Treatment includes metronidazole, followed by luminal agents like paromomycin to eradicate cysts. Travelers should adhere to safe food and water practices, including boiling or filtration.

Case Study 3: Nosocomial Bloodstream Infection

Patient Presentation:

A 60-year-old hospitalized patient develops fever and chills 7 days after central line insertion.

Laboratory Findings:

- Blood cultures: Growth of *Klebsiella pneumoniae* with extended-spectrum beta-lactamase (ESBL) production.
- Antibiotic susceptibility testing: Resistant to penicillins and cephalosporins, sensitive to carbapenems.

Questions to Consider:

- What is the likely source of infection?
- How do you interpret the resistance pattern?
- What treatment should be initiated?
- How can such infections be prevented?

Discussion:

This case emphasizes hospital-acquired bloodstream infections with resistant gram-negative bacteria. Strict aseptic techniques during line insertion, maintenance, and prompt removal are crucial. Antibiotic stewardship and routine surveillance help curb resistance. Carbapenems are typically used for ESBL-producing bacteria, but combination therapy and infection control measures are vital.

Advanced Case Study: Viral Encephalitis

Patient Presentation:

A 25-year-old woman presents with fever, confusion, seizures, and photophobia. She has no significant past medical history.

Laboratory Findings:

- CSF: Lymphocytic pleocytosis, elevated protein, normal glucose.
- PCR testing: Positive for Herpes Simplex Virus type 1 (HSV-1) DNA.

Questions to Consider:

- What is the diagnosis?
- What is the significance of CSF findings?
- What is the appropriate management?
- What are the potential complications?

Discussion:

HSV-1 is a common cause of viral encephalitis. PCR detection of viral DNA in CSF confirms diagnosis. Early initiation of intravenous acyclovir significantly improves outcomes. Since viral encephalitis can cause long-term neurological deficits, prompt treatment is essential.
