Interpreting the Admiralty Tide Table 2013

Understanding Tide Predictions

Tide tables provide two primary pieces of information:

- **Time of High and Low Waters:** The predicted times when the tide reaches its maximum (high tide) and minimum (low tide) levels.
- **Tidal Heights:** The expected water level relative to a fixed datum, often in meters or feet.

Reading the Data

- **Date and Time:** Each entry is associated with a specific date and time, often in Coordinated Universal Time (UTC).
- **Tide Heights:** Usually given as a height relative to a chart datum, indicating the depth of water at that specific time.
- **Tide Graphs:** Many tide tables include graphical representations to visualize the rise and fall of tides over the day.

Key Concepts in Tide Prediction

- **Mean High Water Spring (MHWS) and Mean Low Water Spring (MLWS):** Indicators of average high and low tides during spring tide periods.
- **Neap Tides:** Periods when the difference between high and low tides is minimal.
- **Tide Cycle:** The regular pattern of tides caused by the gravitational pull of the moon and sun, which the tables aim to predict accurately.
