Understanding Masonry Materials

Types of Masonry Units

Choosing the right masonry units is crucial for the strength, appearance, and performance of the structure. Common types include:

- **Bricks:** Traditional clay bricks are fire-resistant and come in various colors and textures. Concrete bricks are larger and more uniform.
- **Concrete Blocks:** Also known as cinder blocks, these are larger, lightweight, and often used for load-bearing walls.
- **Natural Stones:** Including granite, limestone, sandstone, and marble, natural stones provide aesthetic appeal and robustness.

Mortar Types and Composition

Mortar acts as the binding agent between masonry units. Proper selection and mixing are vital for structural integrity.

- **Type M:** High strength, suitable for load-bearing walls and below-grade applications.
- **Type S:** Medium strength, ideal for exterior walls and retaining walls.

- **Type N:** General purpose, used for above-grade walls and interior partitions.
- **Type O and K:** Lower strength, mainly for interior or non-structural applications.

Typical mortar mix ratios (by volume):

- Type N: 1 part cement, 1 part lime, 6 parts sand
