Understanding Tsunamis: Nature's Powerful Force

What Is a Tsunami?

A tsunami is a series of massive ocean waves caused primarily by underwater earthquakes, volcanic eruptions, or landslides. When the seafloor shifts abruptly, it displaces a large volume of water, creating waves that can travel across entire ocean basins at speeds up to 500-800 km/h (310-500 mph). As these waves approach shallow coastal areas, they increase in height, often reaching tens of meters, leading to catastrophic flooding and destruction.

The Impact of Tsunamis on Children

Children are among the most vulnerable during natural disasters like tsunamis. Their smaller size, limited understanding of danger, and dependence on adults can increase their risk. Yet, many children demonstrate remarkable resilience and bravery during these events, often becoming symbols of hope and survival.
