- Select the layer you want to style from the Layers panel.
- Go to the top menu and click on **Layer > Layer Style**, then choose the desired style such as Drop Shadow, Outer Glow, Bevel & Emboss, etc.

Tip: Use the **Blending Options** to combine multiple layer styles for complex effects.

Question 2: Explain how to create and refine a selection using the Quick

Selection Tool.

Answer:

The Quick Selection Tool allows for rapid and intuitive selection of objects within an image. Here's how to effectively use it:

- Select the **Quick Selection Tool** from the toolbar (shortcut: W). It looks like a paintbrush with a dotted circle around it.
- Adjust the brush size using the options bar at the top to suit the area you're selecting.
- Click and drag over the object you wish to select. The tool automatically detects edges based on contrast and texture.
- To add to your selection, continue dragging over additional areas. To subtract, hold down the **Alt** (Windows) or **Option** (Mac) key while painting over unwanted areas.
- Refine the selection by clicking on **Select and Mask** (or **Refine Edge** in older versions) to fine-tune the edges.
- Inside the Select and Mask workspace, use tools like the **Refine Edge Brush** to smooth or feather the selection, improving edge precision.
- Once satisfied, click **OK** to apply the selection.

Tip: Use the Zoom tool to closely inspect edges and ensure smooth, accurate selections.

Question 3: How can adjustment layers be used to non-destructively modify an image?

Answer:

Adjustment layers are essential tools for making reversible edits without altering the original image data. Here's how to leverage them:

- With your image open, go to **Layer > New Adjustment Layer** and select an adjustment such as **Levels**, **Curves**, or **Hue/Saturation**.
- A new adjustment layer appears in the Layers panel above your image layer. Any changes made affect only the layers beneath it.
- Use the adjustment layer's properties panel to tweak settings. For example, moving sliders to adjust tonal range or color saturation.
- To restrict the adjustment to a specific area, right-click the adjustment layer and choose **Create Clipping Mask**. This confines the effect to the layer directly below.
- Adjust or remove the adjustment layer at any time without permanently affecting the original

image. Simply double-click the adjustment icon or delete the layer.

- Stack multiple adjustment layers for complex color grading or tonal corrections, turning adjustments on/off as needed for comparison.

Benefits:

- Non-destructive editing preserves original image data.
- Easy to experiment with different effects.
- Layer masks can be added to control where adjustments apply.
