QuestionAnswer What are the key steps in performing CPR according to the Red Cross guidelines? The key steps include checking the scene for safety, calling 911, opening the airway, checking for breathing, performing 30 chest compressions at a depth of about 2 inches, giving 2 rescue breaths, and repeating the cycle until help arrives or the victim recovers. How do you determine if a person needs CPR? You check for responsiveness by tapping and shouting. If there's no response and they are not breathing or only gasping, CPR is needed to help circulate blood and oxygen. What is the correct hand placement for performing chest compressions during CPR? Place the heel of one hand on the center of the chest, place the other hand on top, interlock the fingers, and keep your arms straight while compressing at a depth of about 2 inches. How many compressions and breaths should be given per cycle in CPR? Perform 30 chest compressions followed by 2 rescue breaths, and repeat the cycle continuously until emergency help arrives or the person shows signs of life. When using an Automated External Defibrillator (AED), what is the first step? Turn on the AED and follow the voice prompts, which include attaching the electrode pads to the person's bare chest and analyzing the heart rhythm. What is the importance of rescue breaths in CPR, and when should they be given? Rescue breaths provide oxygen to the lungs of a person who is not breathing. They should be given after every 30 chest compressions in adult CPR, or as instructed in child or infant CPR protocols. Can CPR be performed on a pregnant woman, and are there any modifications? Yes, CPR can be performed on a pregnant woman. The modifications include performing chest compressions slightly higher on the chest to avoid compressing the uterus and ensuring the airway is open for effective rescue breaths. What are common mistakes to avoid when performing CPR according to Red Cross training? Common mistakes include not pushing hard enough or too shallow, excessive interruptions, failing to call emergency services promptly, and not using an AED as soon as it's available. Proper training and practice help avoid these errors.
