Sample Questions and Detailed Answers

Below are some typical high school physics exam questions with comprehensive answers. These examples cover various topics and demonstrate effective problem-solving strategies.

Question 1: Kinematics

A car accelerates from rest at a constant rate of 3 m/s^2 . What is its velocity after 8 seconds?

Answer:

Using the first equation of motion:

$$v = u + at$$

Where:

- $u = 0$ m/s (initial velocity)
- $a = 3$ m/s² (acceleration)
- $t = 8$ s (time)

Calculating:

$$v = 0 + (3)(8) = 24 \text{ m/s}$$

Therefore, the car's velocity after 8 seconds is 24 m/s.

Question 2: Forces and Newton's Laws

An object of mass 10 kg is pulled across a horizontal surface with a force of 50 N. If the coefficient of kinetic friction between the object and the surface is 0.2, what is the acceleration of the object?

Answer:

First, calculate the normal force:

$$N = mg = 10 \times 9.8 = 98 \text{ N}$$

Next, calculate the frictional force:

$$F_{\text{friction}} = \mu N = 0.2 \times 98 = 19.6 \text{ N}$$

Net force acting on the object:

$$F_{\text{net}} = F_{\text{applied}} - F_{\text{friction}} = 50 - 19.6 = 30.4 \text{ N}$$

Using Newton's second law:

$$a = \frac{F_{\text{net}}}{m} = \frac{30.4}{10} = 3.04 \text{ m/s}^2$$

Answer: The object accelerates at approximately 3.04 m/s².

Question 3: Work and Energy

A box of mass 5 kg is pushed up a 30° incline with a force of 50 N. How much work is done in moving the box 10 meters along the incline? Ignore friction.

Answer:

First, calculate the component of the force in the direction of motion:

Since the force is applied along the incline, the work done:

$$W = F \times d$$

Given:

$$F = 50 \text{ N}$$

$$d = 10 \text{ m}$$

Calculating:

$$W = 50 \times 10 = 500 \text{ Joules}$$

Therefore, 500 Joules of work are done in moving the box 10 meters along the incline.

Question 4: Electricity

Calculate the current flowing through a circuit with a resistance of 20 Ω when a voltage of 12 V is applied.

Answer:

Using Ohm's Law:

$$I = \frac{V}{R}$$

$$I = \frac{12}{20} = 0.6 \text{ A}$$

The current in the circuit is 0.6 amperes.

Question 5: Wave Properties

A wave has a frequency of 50 Hz and a wavelength of 4 meters. What is its speed?

Answer:

Using the wave speed formula:

$$v = f \times \lambda$$

$$v = 50 \times 4 = 200 \text{ m/s}$$

The wave travels at a speed of 200 meters per second.
