Origins and Development of The Storm Runner

Conceptualization and Design Goals

The Storm Runner was conceived as a flagship roller coaster for Hersheypark, aiming to elevate the park's reputation as a destination for thrill-seekers. The ride was envisioned to combine high-speed

elements, innovative technology, and thematic storytelling to create an immersive experience. The design team, led by manufacturer Intamin, sought to develop a coaster that would:

- Achieve a top speed exceeding 70 mph
- Incorporate airtime hills and intense inversions
- Feature a unique launch system capable of rapid acceleration
- Integrate thematic elements aligned with storm and weather motifs

The overarching goal was to craft a ride that not only delivered adrenaline but also offered a narrative-driven experience, setting it apart from traditional coasters.

Development Timeline

The development process from conception to opening spanned approximately three years, beginning in late 2010. Key milestones included:

- Initial concept design and feasibility studies (2010-2011)
- Engineering and structural design (2011-2012)
- Construction phases, including site preparation and track assembly (2012-2013)
- Testing and safety assessments (early 2013)
- Grand opening at Hersheypark in May 2013

Throughout this period, the project faced several challenges, including logistical hurdles, design modifications, and safety evaluations, which ultimately contributed to the ride's final specifications.

Engineering and Technical Aspects

Track Layout and Elements

The Storm Runner's layout is a compact yet intense combination of elements intended to maximize thrill within a limited footprint. Its key features include:

- Launch System: A hydraulic launch propels the train from 0 to 72 mph in approximately 2.3 seconds.
- Top Hat: An iconic 135-foot tall crest that offers a moment of weightlessness.
- Inversions: Includes a vertical loop, a zero-G roll, and a cobra roll, all designed to produce intense sensations of inversion and airtime.
- Airtime Hills: Multiple small hills designed to lift riders out of their seats.

- Twists and Turns: Sharp helixes and rapid directional changes to sustain adrenaline.

The layout is engineered to deliver a roller coaster experience that combines speed, airtime, and inversion intensity in a compact design.

Launch Mechanism and Safety Features

The coaster employs a Hydraulic Launch System, a hallmark of Intamin's engineering prowess, which uses hydraulic pistons to accelerate the train rapidly. This method offers:

- Minimal ride duration but maximum excitement
- Precise control over acceleration and braking
- The ability to launch multiple trains sequentially

Safety is paramount; the ride incorporates multiple redundancies:

- Overhead harnesses with automatic locking mechanisms
- Multiple sensors throughout the track to monitor train position and speed
- Emergency brakes that activate in case of anomalies
- Regular maintenance and safety audits mandated by federal safety standards and local regulations
