feedbackDelays = 1:4;

% Create the NARX network

net = narxnet(inputDelays, feedbackDelays, 10); % 10 hidden neurons

% Prepare data for training

[inputs, targets] = preparets(net, inputs, {}, targets);

```
```

```
```matlab

% Set training parameters

net.trainFcn = 'trainlm'; % Levenberg-Marquardt

net.performFcn = 'mse';

% Train the network

[net, tr] = train(net, inputs, targets);

```
```

Evaluating and Using the Trained Model

After training, test the model:

```
```matlab

% Generate predictions

outputs = net(inputs);

% Convert cell arrays to matrices for analysis

outputsMat = cell2mat(outputs);

targetsMat = cell2mat(targets);

% Calculate performance

performance = perform(net, targets, outputs);
